AUDE Regional Meeting Agenda

ALL EVENTS ARE IN PERSON ONLY

AUDE is delighted to be working with business partner SSE Energy Solutions to deliver it's regional meeting agendas during June and July 2022.

As leaders within university communities, we recognise that AUDE members are under increasing pressure to deliver decarbonisation and net zero carbon targets across campus, as well tackling the perennial need to maintain the highest standards of facilities and services in multiple buildings across the university estate.

Given that good quality higher education is best delivered in good quality physical environments, discerning students are seeking academic excellence, demonstrable value for money and good sustainability credentials, when making their choice of university as a launchpad for their future careers. Therefore, the strategic importance of the work delivered through the university director of estates and senior facilities management professionals cannot be understated.

With this in mind, SSE Energy Solutions, part of the wider SSE plc Group and global leaders in renewable energy, has constructed a CPD programme targeted at the AUDE membership to support them through their journey of decarbonisation, ie, the road to net zero. This one-day regional training event will cover four main sections of interest:

The Road to Net Zero

Agendas will reflect the host nation's policy and legislative landscape.

1. How does policy, legislation and regulation drive decarbonisation?

- Legislation that shapes your decarbonisation strategy
- Target setting and senior commitment
- Carbon data reporting– scope 1, 2 and 3
- Action plan and progress monitoring

2. Using procurement, contracting and financing options to decarbonise

- Approaches to procurement that deliver decarbonisation
- Procurement frameworks to support these goals
- Contract arrangements, strengths of various agreement models
- Financing routes; cost of capital for the university or investor?

3. Practical solution development for decarbonisation

- Infrastructure, light, heat, power, transport, water, air and data
- Impact of the various technologies and solutions
- Pulling all the pieces together to build your decarbonisation roadmap

4. Examples from Academia and Industry

- Real living examples of decarbonisation journeys in action
- Case Studies from academia and industry within your region
- Panel discussion with subject matter experts with hands-on experience

or contact
info@aude.ac.uk

This promises to be a highly interactive and informative session for directors of estates and facilities management. Please do join us for what promises to be an engaging, thought-provoking event.

By attending this CPD program, you will be in a stronger position to navigate your own way through the complex process of decarbonisation. The program will be delivered through subject matter experts from across industry and will include keynote addresses from experts within the wider SSE group business.

We look forward to your participation in this CPD training event – please don't hesitate to reach out if you have any questions.
